

Living with Style

Living with Style

Style and convenience... *today we want it all.*

And thanks to technology and innovation, in most cases we can have it!

We no longer have to settle for conventional building products that need regular maintenance and eventually have to be replaced.

PVC fascia and soffit is the stylish alternative to traditional timber and aluminium; it's versatile, practically maintenance-free, and fast becoming the clear choice for both new-build and renovation.

Why Choose PVC?

Maintenance-free... choice... versatile... easyfit... style... guarantees....

all the product characteristics expected by today's consumer and provided by our products:

- Maintenance-free
- Choice of colour, style and finish
- Resistant to acids, alkalis, weather & other pollutants
- Will not warp, crack, discolour or blister
- Light weight and easy to work with
- Traditional installation methods and tools
- High thermal insulation properties
- Tested fire resistance properties
- 10 and 20 year product guarantees

And in **Freefoam's** case, an **environmentally friendly** solution to your roofline needs.

The fascia and soffit system on a house, often referred to as the roofline, is the finishing/capping on the end of the roof structure where the rafters meet the external wall.

It functions similarly to the skirting at the base of a wall or an architrave on a door frame - without it, the edge would be rugged and exposed and the underneath structures open to erosion and decay over time. It provides both a decorative and protective finish to the roof while allowing industry specified levels of ventilation back into the roof area to avoid condensation problems.

Freefoam's products are designed to protect, to decorate, to ventilate, to insulate... in short, to perform

to perform

Fascia

Freefoam offer a wide range of fascia/reveal liners and full replacement/new build fascias in a choice of styles, sizes and colours to suit any building design and improve the appearance of any facade.

Whether for new-build or renovation, homeowners/installers have a choice of plain, ogee, square edged, or round nosed fascia boards in 8mm and 10mm widths for capping or supported installations, as well as larger 15mm, 18mm and 25mm full replacement/new-build boards for the perfect installation each time.

All fascia systems come complete with matching corners, joiners and end caps, and a selection of roofline accessories to add that finishing touch to any property.

In addition to the 3 popular decor mouldings [ogee, plain-open, and plain-closed], we now offer 2 new scalloped decorative fascias in convex and concave styles for quick, easy and stylish application.

Some profiles can also be used as window boards and can be installed internally or externally as new/replacement window capping or as reveal liners.

to ventilate
& to insulate

to protect
& to decorate

Soffits

Soffits are an integral part of the roofline system enclosing and protecting the underside of the roof edge, while providing ventilation to the inner roof area to minimise risk of trapped moist air. They provide a highly effective and visually appealing long-term solution to regular maintenance.

Freefoam manufacture a solid 10mm general purpose board in a range of sizes and colours from 100mm to our newest 605mm board which is particularly useful for deep soffit application or large box-end construction. It's also available pre-vented for even quicker and easier soffit installation and a seamless finish.

Hollow soffit is another popular choice with installers because of it's attractive panelled effect and installation-friendly tongue & groove profile. The hollow soffit range comes in a choice of 100mm, 250mm and 300mm widths with accompanying ventilation accessories if required.

Cladding

Freefoam's durable cladding profiles provide not only a decorative but also a protective facing on building exteriors, and act as an additional thermal insulation agent.

Cladding can be applied vertically, horizontally, or diagonally as required for various effects, and will enhance the appearance of any building old or new. Two popular choices for external cladding are Shiplap and Open V styles.

The Shiplap range is comprised of a 150mm board and two part trim system for an overlapping boarded effect that resembles timber cladding. It's available in white and 4 woodgrain colours for an authentic look without the maintenance.

The alternative is the 100mm Open V board, again complete with fitter-friendly two part trim system for cost effective and easier installation. The Open V has a prominent V-Groove finish and is also available in white and woodgrain shades for greater choice, variety and style.

Life in full colour

To satisfy the diverse needs and preferences of homeowners, **Freefoam** products come in a wide variety of colours and woodgrain finishes to suit any property or structural design.

The range of colours – generally considered to be the largest on the market – lets you choose a shade that best matches the characteristics of the property. Standard shades include white, black, leather brown, wine red, rustic green, regal blue, storm grey, sable, and pale gold, and a further extended colour palette is available for those special structural designs.

The woodgrain finishes come in traditional mahogany, black ash, light oak and rosewood for an authentic timber-look without the associated maintenance.

Satisfaction guaranteed

Freefoam systems are guaranteed for 10 years as standard against surface defects and discolouration, including the full range of colours.

And more significantly, **Freefoam** are the only company to offer a unique 20 year extended guarantee on products when installed and registered under the online guarantee scheme, which means you can be assured of the highest quality products.

Homeowners can check if an installer is registered to offer the 20 year guarantee online at www.freefoam.com/guarantee by simply entering the installer name.

Doing our bit for the Environment

All **Freefoam** products are 100% Lead-free and manufactured using an advanced formulation which gives superior colour stabilising properties to prevent discolouration.

The elimination of lead in our products means they are more environmentally friendly, showing we are doing our bit for the environment too.

Caring for your Fascia & Soffit

Freefoam PVC fascia, soffit and cladding systems are essentially maintenance-free and once fitted, need just an occasional wipe down with soapy water to maintain their 'just installed' appearance. Do not use solvent-based detergents or cleaning agents as they may scratch or discolour the surface. Also, painting is unnecessary and does not always adhere well to the PVC surface. However, if you do really want to paint your fascia and soffit, consult with a paint manufacturer for advice on possible solutions.

Other Products from Freefoam

Rainwater refers to the gutters and downpipe system, applied after the fascia and soffit, to channel rain to the underground drainage outlets.

Maintenance free rainwater systems mean there's no risk of wall discolouration from rusting metal pipes, or unsightly 'weathered' holes in overhead guttering.

Freefoam's **Freeflow**[®] range includes a half round, square and ogee rainwater system, available in a range of colours to complement any roofline system perfectly.

Freefoam supply a range of attractive **Geo-Panel**[™] cladding profiles for use on walls and ceilings in the bathroom, kitchen and any other interior application. A modern and stylish alternative to traditional tiling and wood panelling, the PVC cladding is available in a wide range of colours and designs to suit all tastes.

Easy to install and even easier to maintain. The panels fit together effortlessly resulting in an attractive V-groove or flat surface finish, which is water resistant, hygienic, and easy to clean.

PVC roofline and rainwater systems need to be fixed using colour-matching plastic-headed pins and nails that blend into the profile and don't detract from the overall look of the installation. Freefoam pride

themselves on supplying the complete solution and thus offer their **Plastops**[®] range of fixings in a variety of sizes and colours to match their fascia, soffit and cladding systems.
