

*Did you know..?
Spectus EcoSpec
frames could cut the
UK's annual CO2
emissions by the
equivalent of
boiling a kettle over
855 million times**

The difference is clear to see

* Based on a UK average. For more information visit www.spectus.co.uk

ecoSpec

DEVELOPED BY SPECTUS

EcoSpec is the first PVC-U frame from Spectus to offer a greener option.

The outlook is greener

...with a GREAT SALES OPPORTUNITY for you.

Our printing is committed to supporting sustainable managed forests

The difference is clear to see

EcoSpec is the first PVC-U frame from Spectus to be greener than standard PVC-U frames.

The outlook is greener...
...with a **GREAT SALES
OPPORTUNITY** for you.

Another first for Spectus

Spectus has a history of market leading initiatives and in giving our customers clear advantages in an increasingly competitive market.

We were the first in the UK to provide a 5 chamber system with knock in beads and post co-extruded gasket along with options of both ovolo and bevel solutions.

We now bring you EcoSpec...

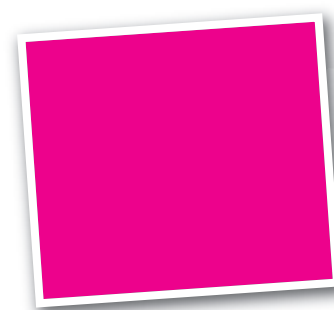

It looks the same but it's greener.
That's better for the environment
and great for business.

EcoSpec uses injected core technology to co-extrude recycled PVC-U materials into the heart of the product. The beautiful thing is that there is absolutely no detriment to the visual appearance, the structural integrity, the performance of the window or its ability to comply with all current standards. EcoSpec also helps the environment by using recycled materials.

ecoSpec ...the greener profile

We all want to do our best to minimise our impact on the environment. By fitting EcoSpec high performance PVC-U windows you are not only improving the thermal efficiency of your home, but can now also achieve lower environmental impact, by using recycled materials without compromising performance or aesthetic appeal.

- ♻️ We take old windows
- ♻️ We recycle the PVC-U
- ♻️ We create new frames

1. We reduce the requirement of new PVC-U therefore reducing oil consumption and carbon emissions.
2. We re-use any waste PVC-U created during the manufacturing processes.
3. We re-cycle used PVC-U windows back into EcoSpec components for new windows and conservatories.

WINDOWS

Spectus EcoSpec profiles can be combined to create any style of window and meet any functional need.

CONSERVATORIES

Spectus' range of conservatories has been designed to cater for any size, shape and age of property.

Why choosing EcoSpec frames over our standard frames will give you a major competitive advantage...

A 'Greener' option

Reduce, re-use, re-cycle are the guiding principles to minimise environmental impact. Our frames satisfy all three. We reduce the requirement of new PVC-U therefore reducing oil consumption and carbon emissions. We re-use any waste PVC-U created during manufacturing processes. We re-cycle used PVC-U windows back into EcoSpec components for new windows, doors and conservatories.

Higher sales conversion

Greater sales opportunity by presenting EcoSpec to your customers you are creating.

Quality and stylish looks

Designed to provide customers with a market leading multi chambered profile, single leg knock in bead to speed up the installation process, minimal sight lines to improve Window Energy Ratings and adds to the aesthetic finish.

High performance levels

The Elite 70 is Spectus' flagship product, designed after extensive research in technology and thermal efficiency. Through continuous evaluation in design and quality testing, we have devised a suite of products that maximise the retention of solar heat gain within the property, whilst minimising any thermal and air loss.

Great value

All Spectus products will meet the same high performance criteria you have come to expect. There is no compromise on quality, performance or thermal efficiency.
