

VENTILATION REGULATIONS HAVE CHANGED!

NEW BUILD

The ventilation requirements for new build houses has increased. In simple terms, this means more ventilation through the same size windows.

REPLACEMENT

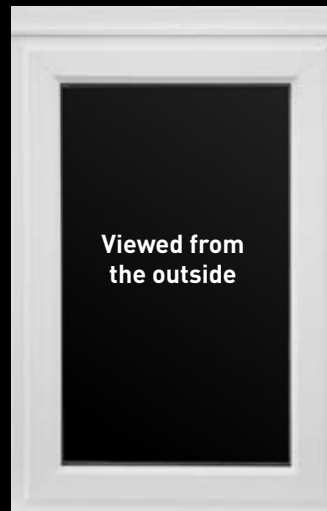

Awaiting statement from GGF. 'Mood' is towards more ventilation.

THE SOLUTION

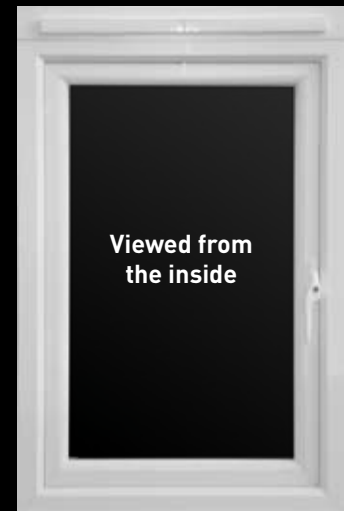

WINDOWWIDGETS has designed an overhead vent profile to accept virtually all of the common trickle ventilators. It allows you to make windows, without ventilation and to simply fit the overhead ventilator over the frame. The design accommodates plasterline and tile lines (up to 25mm) common in replacement work (a bit like having a 25mm add on above your frame). The overhead ventilator profile can be pre-slotted to accommodate 2500mm²EA or 50002EA or more and simply fitted above a frame.

TRICKLE VENTS ARE UGLY!

The clever design of the WINDOWWIDGETS overhead ventilator conceals the ventilator when viewed from the outside.

the outside

Viewed from
the inside

(Note - Top 15 - 25mm will be concealed by the plasterline and will not be seen)

PART NO.	DESCRIPTION	SYSTEM	PACK SIZE
OHV5448 (Specify White)	Over Frame Vent - White	58 - 70mm	4 x 4.8m
OHV5448 (Specify Foil)	Over Frame Vent - Foiled	58 - 70mm	2 x 4.8m
